STC No.: SR03260NY-D		Agusta Westland AW139																														
STC Holder: Diagnostic Solutions International, LLC (DSI) 2580 East Philadelphia Street, Unit C, Ontario, CA 91761																																
STC Issue Date:	March 2013																															
STC Reissue Date:																																
Applicable to:	AW139																															
HUMS Model:	Model 1134																															
NOTE: Air Concepts International Transfer to DSI 10.2017																																
<p>SUMMARY:</p> <p>Honeywell, in conjunction with Air Concepts International (ACI), has developed an automated vibration monitoring and fault diagnostic system for the Agusta Westland AW139 helicopter. This system will monitor the health of the equipment during routine operation and initiate work instructions to correct any warnings or faults detected. In addition to Rotor Track and Balance (RT&B), the system monitors the status and health of the drive train while also recording any engine related exceedances that may occur during operation.</p> <p>Kits are available for new installations as well as upgrades for those aircraft using Honeywell's VXP system. Options provided for data download via a cockpit interface panel using a USB memory device or a Quick Access Recorder (QAR).</p>
